Claim Rejections - 35 USC § 112

1. Claims 36-41 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 36 is directed to a patch containing a formulation, and recited that "the penetrants transport agents through the pores of an adaptable semi-permeable membrane barrier", and also recited the patch as including a backing liner and a non-occlusive liner; it is unclear whether one of the liners constitutes the semi-permeable porous barrier. Claim 37 refers to the inner liner as capable of "skin wetting" when in contact with the skin, does the inner liner constitutes the semi-permeable barrier permeating the penetrants?. Does the penetrants pass through the non-occlusive, porous, backing liner?

Drawings

2. The drawings are objected to under 37 CFR 1.83(b) because they are incomplete. 37 CFR 1.83(b) reads as follows:

When the invention consists of an improvement on an old machine the drawing must when possible exhibit, in one or more views, the improved portion itself, disconnected from the old structure, and also in another view, so much only of the old structure as will suffice to show the connection of the invention therewith.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement

Art Unit: 1723

sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance. Figures 11-14 do not identify the liners or the porous barrier by a numeral.

3. The disclosure is objected to because of the following informalities: a brief description of figures is required. Applicant list fourteen figures, some of them are briefly discussed, and some are discussed in detail. Applicant is requires presenting a brief description of all the figures, and a detailed description of the figures that require more description.

Appropriate correction is required.

Allowable Subject Matter

4. Claims 36-41 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action. The patch as whole, including the specific composition or formulation within a reservoir formed between a porous backing liner and an inner liner. Patches containing different compositions to be transmitter though a membrane to the skin of an animal at

predetermined doses are known in the art as recognized by the present inventor. The composition for the formulation is also known by Cevc ('500), combining the specified composition in a patch as claimed in the present invention including the membrane-like coating (as defined in the specification), at the pH conditions, and solubility, is not suggested in the prior art of record.
